Dear Hiring Committee,

My love for handling software dates back to my earliest memories and has always been central to my identity. I'm applying for a Software Engineering role at Rippling because it would be an excellent chance for me to express my passion for software engineering by working on what I love most. I am interested in leveraging my enthusiasm to improve all aspects of HR & IT management, and I would welcome the opportunity to do so in an environment that is collaborative and inspiring.

To this role, I bring a solid understanding of software development concepts and strong initiative. Having worked for several startups, I am accustomed to working in fast paced environments and am adept in being able to hit the ground running. My work with Arravon Technologies allowed me to hone my programming skills and adapt them to a professional setting as a real developer. With a team of less than 10 people, we were able to create and design a fluid, fully functional college campus experience application used in multiple universities throughout Canada. My later positions at Aibers Health and Blanche fleshed out my software engineering skills and I was able to apply myself to the fullest. Both companies gave me the independence to take lead on many projects, which allowed me to deliver robust, large scale solutions. As an employee at Rippling I would be able to contribute my development skills to the team and hope to add to the collaborative environment.

Working for Rippling would be a great opportunity to combine my deep personal love for technology with my interest in working in application and system development. Rippling's mission resonates with me because of the impact that technology had on my own life and academic development from a young age, and I look forward to working towards bringing the same type of experiences to inspire future generations. I'm also very interested in learning more about career possibilities in product engineering, which I'm exploring as a possible career path. Working with a company at the forefront of these areas would allow me to explore them deeply and build a career interest.

I am excited by the possibility of making a positive impact on the important efforts of Rippling. Please feel free to contact me by email at us.sukhera@gmail.com, or by phone at (510) 424-1466. Thank you for your consideration; I hope to discuss my interests and skills with you soon.

Best,

Usman Amin
